ANALYSIS

CONCLUSIONS

ZARA

SALES EXPLORATORY DATA ANALYSIS

JUGLAIR KRISTEL CLAIRE

BUSINESS CONTEXT

Zara operates in **fast-fashion** and it is characterized by:

- Short product cycles
- Seasonality
- Global supply chain
- Fast data driven decision making

DATASET & CLEANING

Analyze sell data and find relevant pattern of **seasonality, materials, origin** of the products and **market** segmentation to support decision making process about business, pricing and sourcing.

Tools: Kaggle | Excel | PowerQuery | PowerBI

BUSINESS QUESTIONS

1. Which countries contribute most to sales?
2. What drives sales across seasonality?
3. Which materials perform best?
4. Are there any difference between Men and Women?

GEOGRAPHIC INSIGHTS

Sales are concentrated in a limited number of sourcing countries (mainly in Europe and Asia) → high dependance to specific productive areas

➤ Supply chain risk → opportunity of diversification of suppliers

Count of sales by origin

SEASONALITY INSIGHTS

- Seasonal products consistently outperform non-seasonal ones
- **Autumn** and **Winter** registered a higher level of sales

- Reinforce prior planning of seasonal collections
- Reduce non-seasonal stocks during peak periods

Average of sales by Seasonal

MATERIAL INSIGHTS

- Satin and Silk have lower demand
- Cotton, wool, polyester and linen have higher demand

- Optimization of sourcing material
- Reduce overproduction on low demand materials

SECTION INSIGHTS

- Women drive volume
 - Men drive margin due to a higher selling price
- Differentiated strategies by pricing and tastes

BUSINESS IMPLICATIONS

1. Inventory optimization
2. Sourcing strategies
3. Pricing differentiation

LIMITATIONS

- No data of costs available for planning strategies
- No time series forecasting

NEXT STEPS

- Price sensitivity study
- Seasonality demand forecasting
- Inventory data integration

THANK YOU
